AHMED FAAZ LAEEQ

FULL-STACK DEVELOPER | APPLIED AI & LLM SYSTEMS

Karachi, Pakistan | faazlaeeq@gmail.com | +92 341 2394412 | GitHub | LinkedIn | Portfolio

SUMMARY

Full-stack and mobile developer with professional experience building web and Flutter applications. Combines frontend development in React and Next.js with backend services in Node.js, Express, and Python (FastAPI). Hands-on with autonomous LLM agents (CrewAI, LangChain) and machine learning pipelines (Scikit-Learn, TensorFlow, Hopsworks). Seeking a Junior Full-Stack role to contribute across web development while expanding into applied AI engineering under senior mentorship.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Dart, C#, HTML, CSS
Frontend: React.js, Next.js, Tailwind CSS, Framer Motion, Flutter, responsive UI
Backend & APIs: Node.js, Express.js, Python (FastAPI), REST APIs, JWT authentication
AI & Machine Learning: CrewAI, LangChain, OpenAI API, Gemini API, Pydantic, Scikit-Learn, TensorFlow, Hopsworks
Databases & Tools: Firebase (Firestore, Storage), Supabase, SQLite, SQL Server, Git, Postman, Vercel

WORK EXPERIENCE

Junior Flutter Developer | Rubikkube (Remote)
- Built and maintained cross-platform mobile application features from UI implementation to backend integration.
- Integrated Firebase Authentication, Cloud Storage, and Firestore for user data management and asset storage.
- Collaborated in a remote agile team using state management (Bloc, GetX) and resolved UI/performance bugs.

Freelance Web & Mobile Developer | Upwork / Fiverr
- Delivered web pages, business dashboards, and client-side tools using JavaScript, React, and Flutter.
- Managed project requirements directly with clients from initial scoping through implementation and deployment.

PROJECTS

Maple AI - 24/7 Dental Assistant & Booking Widget | React, Node.js, Express, Gemini API, Firebase
- Built a conversational booking widget in React and Express that interfaces with the Google Calendar API to check availability and book patient appointments.
- Implemented email OTP verification via Resend before confirming appointments to validate contact details.
- Curated a dental domain knowledge base to ground Gemini API responses and reduce conversational hallucinations.

AQI Prediction System - End-to-End ML Pipeline | Python, Scikit-Learn, TensorFlow, Hopsworks, FastAPI, Streamlit
- Engineered 19 pollutant, weather, and time-based features from OpenWeather API data, stored in a Hopsworks Feature Store.
- Trained and compared 3 models (RandomForest, Ridge Regression, Neural Network) by R-squared score, with SHAP for feature explainability.
- Deployed a FastAPI service for inference and built a Streamlit and Plotly dashboard for live AQI visualizations.

Autonomous Research & Review Multi-Agent Pipelines | Python, CrewAI, LangChain, Pydantic
- Built a 4-agent collaborative crew (Planner, Researcher, Fact-Checker, Writer) using CrewAI to retrieve web data and draft structured reports.
- Applied Pydantic schema validation to parse and categorize unstructured user feedback into structured bug and feature records.

EDUCATION

BS in Financial Technology (Fintech) | Mohammad Ali Jinnah University, Karachi (CGPA: 3.87, 2024 - Present)
Associate Degree in Software Development | Mohammad Ali Jinnah University, Karachi (CGPA: 3.88, 2022 - 2024)
Diploma in Software Engineering | Aptech Computer Education (2019 - 2022)

CERTIFICATIONS

- Multi AI Agent Systems with CrewAI | DeepLearning.AI
- Blockchain Specialization | NED University of Engineering & Technology (July 2026 - July 2027)
